

1

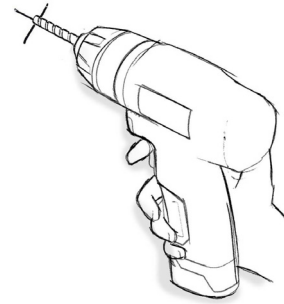

Choose from the supplied screws and wall-plugs, or choose an adhesive that is appropriate for the surface you are fixing the magnetic knife rack to.

2

Determine the desired placement for the magnetic knife rack.

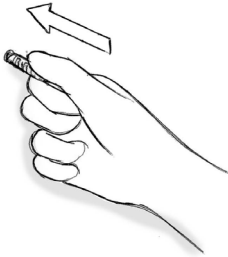

3

Using an adhesive - skip to step 7.

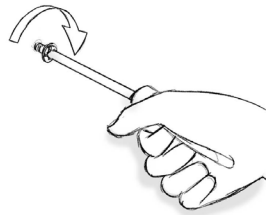

Using screws - drill the holes in the appropriate locations.

4

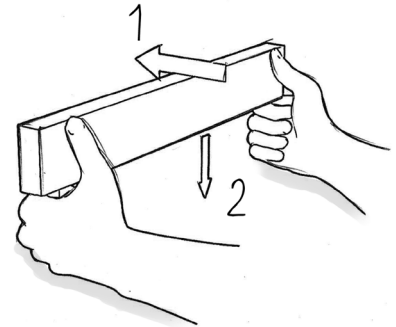

Insert the wall-plugs into the holes.

5

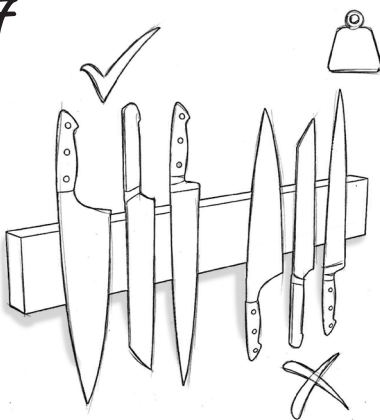

Screw in the screws into the wall-plugs leaving enough of the screw showing for the magnetic knife rack to slide over.

6

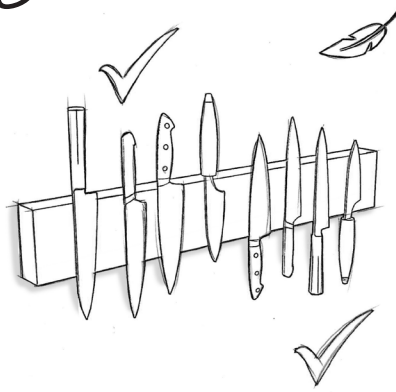

Install the magnetic knife rack by placing the slots in the back over the screws and then slide it down to lock. Adjust the screws as required for a secure fit.

7

We recommend placing heavy knives with the handles up and resting the bottom of the handle against the top of the holder for maximum security.

8

Lighter knives can be placed in any orientation. If placing with the handles up, we recommend resting the bottom of the handle against the top of the holder.
